F50V Software and Firmware Compatibility

There is new software for the F50V series radios. The firmware in the radio determines which software is compatible with the radio.

The versions for the new software and firmware are designated with three digits, not two as in older versions e.g. *v3.1.1*, not v3.1.

Important: Software that has a three digit version is not compatible with firmware with a two digit version; Software with a two digit version is not compatible with firmware with a three digit version.

CS-F50V MM v3.1.1   CS-F50V v3.1
FX3060B v3.6   FL3060A v3.6.2

What Software and Firmware to Use

Current radio software and firmware:

> Software **CS-F50V MM** v3.1.1 or greater uses firmware **FL3060A** v3.6.2 or greater.

Older radio software and firmware:

> Software **CS-F50V** v3.1 or less uses firmware **FX3060B** v3.6 or less.

Check Your Firmware

To determine which software your radio is capable of using, check the firmware.

1. Press and hold the Up Arrow and P3.

2. Switch the power on.

The display will show the firmware version.

You can also check the radio firmware version from the cloning software at the **Clone** -> **Information** window.
